

ENTERPRISE COMPUTING INTRODUCTORY SESSION

LAB 1/W2

4TH YEAR - ENSIA

OBJECTIVES

- Quick Recap on the Software engineering life cycle.
- Discussion on
 - Requirements for an enterprise DMS
 - Architecture & Technological Stack

EXERCISES & DISCUSSION

Task / Exercise C1 [15 Minutes] (Recap & Revision) :

Answer the following Questions:

- What are the main phases of the SDLC?
- What distinguishes an "enterprise system" from a regular application?
- How does the enterprise context change requirements gathering compared to small-scale software?
- Why is maintenance/evolution particularly critical for enterprise systems?

Task / Exercise C2 [45 Minutes] (DMS + Requirements Eng & Enterprise Attributes) :

A private bank in Algeria with 1000 employees across 50 branches wanted your company to develop a comprehensive DMS solution. The bank operates with the following departments:

- **Investment Department:** Manages client portfolios, investment contracts, market research reports
- **Human Resources:** Employee records, contracts, payroll documents, recruitment files
- **IT Department:** System documentation, vendor contracts, security policies
- **Operations:** Daily transaction records, account opening documents, loan applications
- **Legal & Compliance:** Regulatory filings, audit reports, legal contracts
- **Customer Service:** Customer correspondence, complaint records, service agreements
- **Procurement:** responsible for purchasing items for the bank.

In Groups/Pairs, discuss :

- Existing DMS Solution and their prices (Search online or ask AI tools).
- What are the primary tasks to be done by each end user : Functional Requirements
- What are the enterprise attributes to be considered for the DMS to develop.
- For what feature you can integrate AI into the DMS

Task / Exercise C3 [30 Minutes] (Software Architecture) :

Discuss the architecture and technological stack to be used for this enterprise software
